**Use Case Diagram – Login & Registration**

Assumptions:

- When user click register button the system should check validation of entered details.
- If tourist details are wrong like email, phone number are not in correct format, system should decline that registration.
- When registered tourist or operator click login button the system should verify the username and password.
- If username and password are wrong system should reject that login and display Invalid login message.
- Registered tourist can Modify and Delete his account.
